

## To add a folder to the system path environment variable

Start->Computer->(Rightclick)Properties

## Advanced System Settings

The screenshot shows the Windows 7 Control Panel window. The address bar indicates the path: Control Panel > System and Security > System. The left sidebar contains several links: Control Panel Home, Device Manager, Remote settings, System protection, and Advanced system settings (highlighted with a red rectangle). Below the sidebar, there are links for Action Center, Windows Update, and Performance Information and Tools.

## Environment Variables

Find Path in System variables then click edit

Add the desired path entry. Make sure the spaces are right with no spaces trailing the file or semi-colon.

Click OK to dismiss all the boxes and close system information.

Restart any programs that depend on the path entry you have just made.
